2 June 2026. To whom it may concern. Re: Lachlan Okafor-Nguyen, born 2 September 2018.

I am Lachlan's treating paediatrician and have seen him since March 2025. Lachlan has moderate persistent asthma. He was admitted to Loddon Valley Hospital for two nights on 12 March 2025 after a severe exacerbation triggered by a viral infection.

His current treatment is a preventer inhaler taken twice daily and a reliever inhaler for symptoms, used with a spacer. I reviewed his Asthma Action Plan on 2 June 2026. The plan must be followed in both parents' homes and at school. Missed preventer doses over several days materially increase the risk of another admission.

Zara Okafor-Nguyen has no chronic medical conditions that I am aware of. I have not assessed her.

I recommend that Lachlan be reviewed again in about six months and that both parents attend an asthma education session. If the family relocates interstate, a transfer of care letter will be needed and I can provide one.

Yours faithfully, Dr Imogen Prasad, Consultant Paediatrician.
